

Welcome to Points to Ponder for November 2014, I am pleased to advise you that sales are up, particularly with our new under path products which are gaining acceptance and specification on new work to protect paths and pipes. Google "UPGI" if you have not seen the system yet. We had a stand at CIVENEX a couple of weeks ago and from that a couple of YouTube videos were produced, one for Under Path Growth Inhibitor (UPGI), one for UPGI for trenches and one for Root Barriers and building foundations. Check out links below:

Video 1: Root Barrier http://youtu.be/rWtdZ8wGi_0

Video 2: UPGI <http://youtu.be/pfei4MbHAvI>

Video 3: UPGI for Trenches <http://youtu.be/XtDZUDM1S34>

The weather is warming again with hot dry air for a majority of the time, this is sucking the moisture out of the soil causing the re-active clay to shrink. Root Barrier flexible waterproof cut-off walls are a viable defence to protect your slab footings from movement caused by moisture change.

We have peer reviewed civil engineer

designs and compliance certification for product and process.
